 Kuala Lumpur, Malaysia

 daniel-joshua-portfolio428.netlify.app

Full-Stack Developer specializing in building high-performance, scalable web applications using modern JavaScript ecosystems. Experienced in developing responsive front-end interfaces, robust RESTful APIs, and efficient database systems. Strong focus on clean architecture, performance optimization, and delivering seamless user experiences. Passionate about building real-world products and continuously improving technical expertise.

Education		
Information Systems (F - D), <i>University of Malaya</i>  - Built E A I (10+) for dataset retrieval, filtering, and analytics processing - Designed and implemented a dashboard handling 1,000+ for visualization and exploration - Integrated M DB/ L with optimized queries, reducing average data fetch time by ~30% - Collaborated with a team of 3 5, following weekly sprint cycles and code reviews - Tested and debugged system modules, improving stability across 15+	03/2025 – 06/2025 Kuala Lumpur, Malaysia	
A M, <i>Class Project</i> - Developed a web-based attendance system to simplify record management for students and lecturers. - Implemented role-based access with separate features for 2. - Designed database structures for storing student profiles, courses, and attendance records. - Created reporting features to help users monitor attendance status efficiently.	04/2020 – 10/2025	
D & F, <i>Research Tool</i> - Built a search and filtering system to improve exploration of structured research datasets. - Developed 10+ E A I for searching, sorting, and retrieving data. - Implemented filtering features based on keywords, categories, and data attributes. - Improved the usability of research data by providing a cleaner and faster discovery process.	04/2025 – 02/2026	
- C A, <i>Personal Project</i> - Developed a real-time messaging application to explore WebSocket-based communication. - Implemented user authentication, instant messaging, and message history storage. - Built backend services for managing user sessions and chat data. - Tested the application with 20+ to improve stability and performance.	06/2024 – 12/2024	
D D, <i>University Project</i> - Developed a web-based dashboard to help researchers manage, explore, and visualize structured datasets. - Built reusable frontend components, backend APIs, and database integration for research workflows.	12/2024 – 06/2026	

- Created **5+** dashboards to present data insights in a clearer and more interactive way.
- Improved data accessibility by replacing manual spreadsheet-based analysis with a centralized web platform.

E-C **A** , Course Assignment Project

04/2023 – 06/2026

- Built a full-stack online shopping platform with product browsing, cart management, authentication, and order processing features.
- Designed and implemented **8+ E A I** for handling users, products, and order data.
- Developed reusable React components to improve frontend consistency and maintainability.
- Designed database models to manage product inventory and customer information.
